

16 Free Transitions

A Free After Effects Template

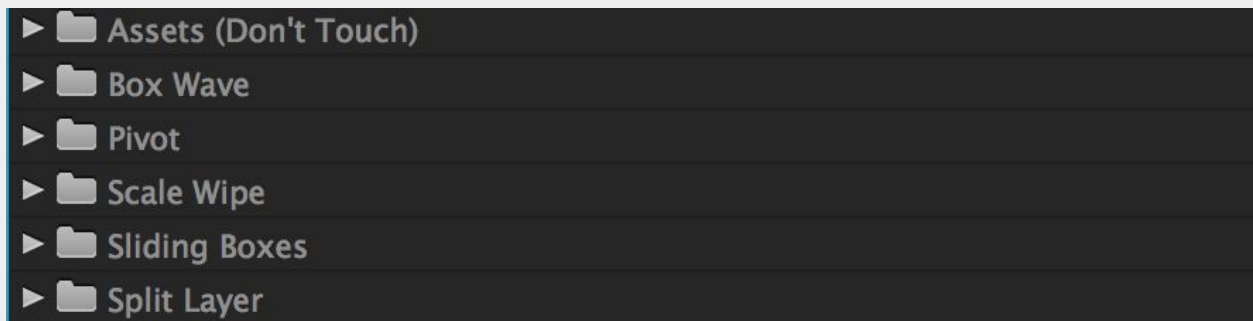

Getting Started

Download and Unzip the Template

Your files will download as a .zip file. Simply unzip and double click on the After Effects project file. If you are reading this document, you have probably already completed this step.

Open the Project

The project is optimized for After Effects CC and CS6. In the project panel, you will see six folders:

Inside each folder is a series of transition compositions. To open the compositions simply double click and they will pop up in your timeline and composition panel. The 'Assets' folder has solids and various other shape layers. You shouldn't need to open the Assets folder for any reason.

Using the Template

Simply drag your desired transition composition into your desired composition. If you want to customize the colors you can simply open the respective composition and adjust the fill effects on the 'Color Control' layer. You can also export each composition using alpha channels to create video that can be easily layered in your NLE of choice.

Note: You can open this transition template in another After Effects template.
